RESEARCH EXPERIENCE

Embedded RL Control for Robots

Aug. 2022 – Apr. 2025

Master's Thesis in Sharif University of Technology

Tehran, Iran

Supervisors: Nobahari Hadi, PhD

- Designed zero-sum, disturbance-augmented training that kept policies stable under $10\times$ worst-case perturbations.
- Built 15 k LOC RL control stack (DDPG, TD3, SAC, PPO) in PyTorch/TensorFlow+Gym for embedded robots.
- Optimized neural network models through quantization techniques to enhance performance for constrained hardware with limited CPU/memory resources.
- Validated robustness on Gymnasium locomotion tasks—Ant, Humanoid, HalfCheetah, Walker2d.
- Ported the system to a C++/Python ROS 2 hardware-in-the-loop node for on-board testing.
- Open-sourced full code, LaTeX report, and Jupyter demos to enable one-command reproduction for future researchers.

Researcher at CNAV Lab

May 2020 – Feb. 2025

Head of Lab (Current), Researcher (Former)

Tehran, Iran

Supervisors: Nobahari Hadi, PhD and Sharifi Alireza, PhD

- Led projects on embedded AI in C, reinforcement learning, and ROS for robotic control systems.
- Designed RL algorithms to enhance robot navigation, decision-making, and adaptability.
- Robust in-motion transfer alignment method based on the multilayer neural network. 
 - Proposed LSTM–MLP that performs in-motion using only IMU + SINS data when GPS is unavailable.
 - Cut navigation drift to $<0.1\%$ of the Kalman-INS error during 100 s GPS outages.
 - Generalized across ship, ROV, and car datasets, outperforming conventional methods out of domain.
